PROJECT EXPERIENCE

Agentic Resume Screening - An AI-powered resume screening system that automatically analyzes and filters resumes based on job requirements. It helps recruiters shortlist suitable candidates faster by reducing manual effort and improving screening accuracy using intelligent decision-making logic.

AC Waiting Hall System - A system with admin and worker modules, where workers can allocate waiting seats for users. Worked as a Backend Developer, contributing to the worker-side functionalities. (Ongoing).

HostelIMS - A web-based system to manage hostel operations such as student registration, room allocation, complaints, and payments, with separate portals for Admin and Students and a centralized management approach.

Larvix - A smart application that automates workflows using efficient data handling and a clean, user-friendly interface, designed for reliable and scalable use.

HOBBIES AND INTERESTS

- Watching movies and web series
- Exploring new technologies and ideas
- Coding and problem-solving challenges
- Listening to music and casual gaming for relaxation
